The diagram illustrates the decomposition of a square into two rectangles. On the left, a blue rectangle and a red rectangle are shown side-by-side. On the right, a large blue rectangle and a red rectangle are shown side-by-side. The red rectangle on the right is smaller than the one on the left, indicating a different decomposition or a different set of dimensions.

Yes	121
No	915

The diagram shows two rectangles side-by-side. The left rectangle is white with a blue border. The right rectangle is light red with a red border. The top edge of the white rectangle is dashed red, and the top edge of the red rectangle is dashed blue.

The diagram shows a large square divided into four regions. The top-left region is a solid blue square. The top-right region is a solid red rectangle. The bottom-left region is a dashed red square. The bottom-right region is a solid blue rectangle. This illustrates the decomposition of a square into four regions based on the side lengths of the inscribed square.
